

*GeAmp 3W
is a little but bally amplifier,
made for guitar and harmonica...*

*The vintage electronics, selected
brand loudspeakers, the walnut
enclosure give to it a warm sounding
and a vivid dynamic.*

*More powerful than
the MicroCombo 1W,
it will let you better project
the sound of your instrument
and even play on a small stage.*

GeAmp3W
MicroCombo by Guitar Poppa

A MICROAMP THAT DOESN'T LACK OF MUSCLES

- ***MicroCombo 3W is mighty, while remaining mobile***
 - Solid european walnut enclosure. Size : 25cmx17cmx12cm.
 - Power 3W RMS. 230V mains supply integrated or external Laptop type.
 - 5 "/ 91dB loudspeaker, Celestion, Sica or Jensen, to be chosen when ordering.

The increased power and emissive surface enable a comfortable performance.

SOUND AND TEXTURE

- ***3 voicings and a special control to set the tone and the general grain.***
 - **Normal** (center): 100-5000 Hz flat bandwidth. Clean sound for normal input level.
 - **Fat**: 80-200Hz bass boost and fatter grain for those who like some dirty sound.
 - **Sharp**: 1500-6000 Hz treble boost and crunch on the accents, welcome in rock / pop.

Combine tone control with a single knob to handle midrange and treble.

Flat (center) – Attenuated treble below - hollowed medium and boosted treble above.

- ***Germanium amplification without sourness***

Warm sound and rounded response even when the amp is heavy overdriven.

The light grain of the preamp and the drive of the power amp combine to deliver a sonic texture that is not that of the tube, but has nothing to regret!

CONNECTIVITY

- ***MicroCombo3W gives to you a full connectivity***
 - **Input Jack**. High impedance buffered input. Nominal level to be selected when ordering.
 - **Phone output jack** (3.5mm), disconnecting the speaker, adjustable volume (on request).
 - **Line output jack** (6.35mm), to connect another amp, a PA system or a recorder.
 - **Speaker output jack**(6,35 mm), to connect another cabinet.
 - **IEC mains socket** (on internal 230V power supply option).
 - **2.1mm coaxial jack**, center positive (on external power supply option).
- The power then varies between 2W and 4W RMS for a supply between 16V and 24V.

AN HIGH QUALITY FOR A COMPRESSED PRICE...

All that for 269€
